

随着白炭黑用量的增大,ACM/PET TPV 的质量变化率呈减小趋势,耐油性能提高。这一方面是由于白炭黑的补强作用使材料的界面相容性变好,因此耐油性能得以改善;另一方面白炭黑对 PET 结晶起到了诱导成核作用,提高了聚酯的结晶度,使其耐油性能提高。

3 结论

(1)与硅土、炭黑 N550 相比,白炭黑对 ACM/PET TPV 体系的补强效果最显著。

(2)白炭黑的填料网络结构使 TPV 的表观粘度明显增大,白炭黑的加入能够提高 TPV 的耐油性能。

(3)当补强剂用量为 30~50 份时,ACM/PET TPV 的物理性能最好;当白炭黑用量为 50 份时,ACM/PET TPV 的综合性能最佳。

Abstract: The acrylate rubber(ACM)/polyethylene terephthalate(PET) thermoplastic vulcanizate(TPV) was prepared by dynamic vulcanization method, and the influence of different reinforcing agents(siliceous earth, carbon black and silica) on the physical properties, rheological property and oil resistance of ACM/PET TPV was investigated. The results showed that, compared with siliceous earth and carbon black, silica was more effective in the reinforcement of ACM/PET TPV. By adding silica, the apparent viscosity of ACM/PET TPV increased, and the physical properties and oil resistance of ACM/PET TPV were significantly improved. When the addition level of silica was 50 phr, the comprehensive properties of ACM/PET TPV was the best.

Key words: ACM; PET; thermoplastic elastomer; reinforcing agent

橡胶基阻尼材料及其制备方法

中国分类号:TQ336.4+2 文献标志码:D

由上海交通大学申请的专利(公开号 CN 102140207A,公开日期 2011-08-03)“橡胶基阻尼材料及其制备方法”,涉及橡胶基阻尼材料配方

为:乙丙橡胶 0~200,丁腈橡胶 0~200,石油树脂 0~200,酚醛树脂 0~200,增塑剂 6~16,过氧化物硫化剂 1~6。该材料可在保持原有阻尼峰值不明显下降的同时,有效拓宽阻尼温域。
